## Drowsiness Monitoring System

## 困倦监控系统

### Overview

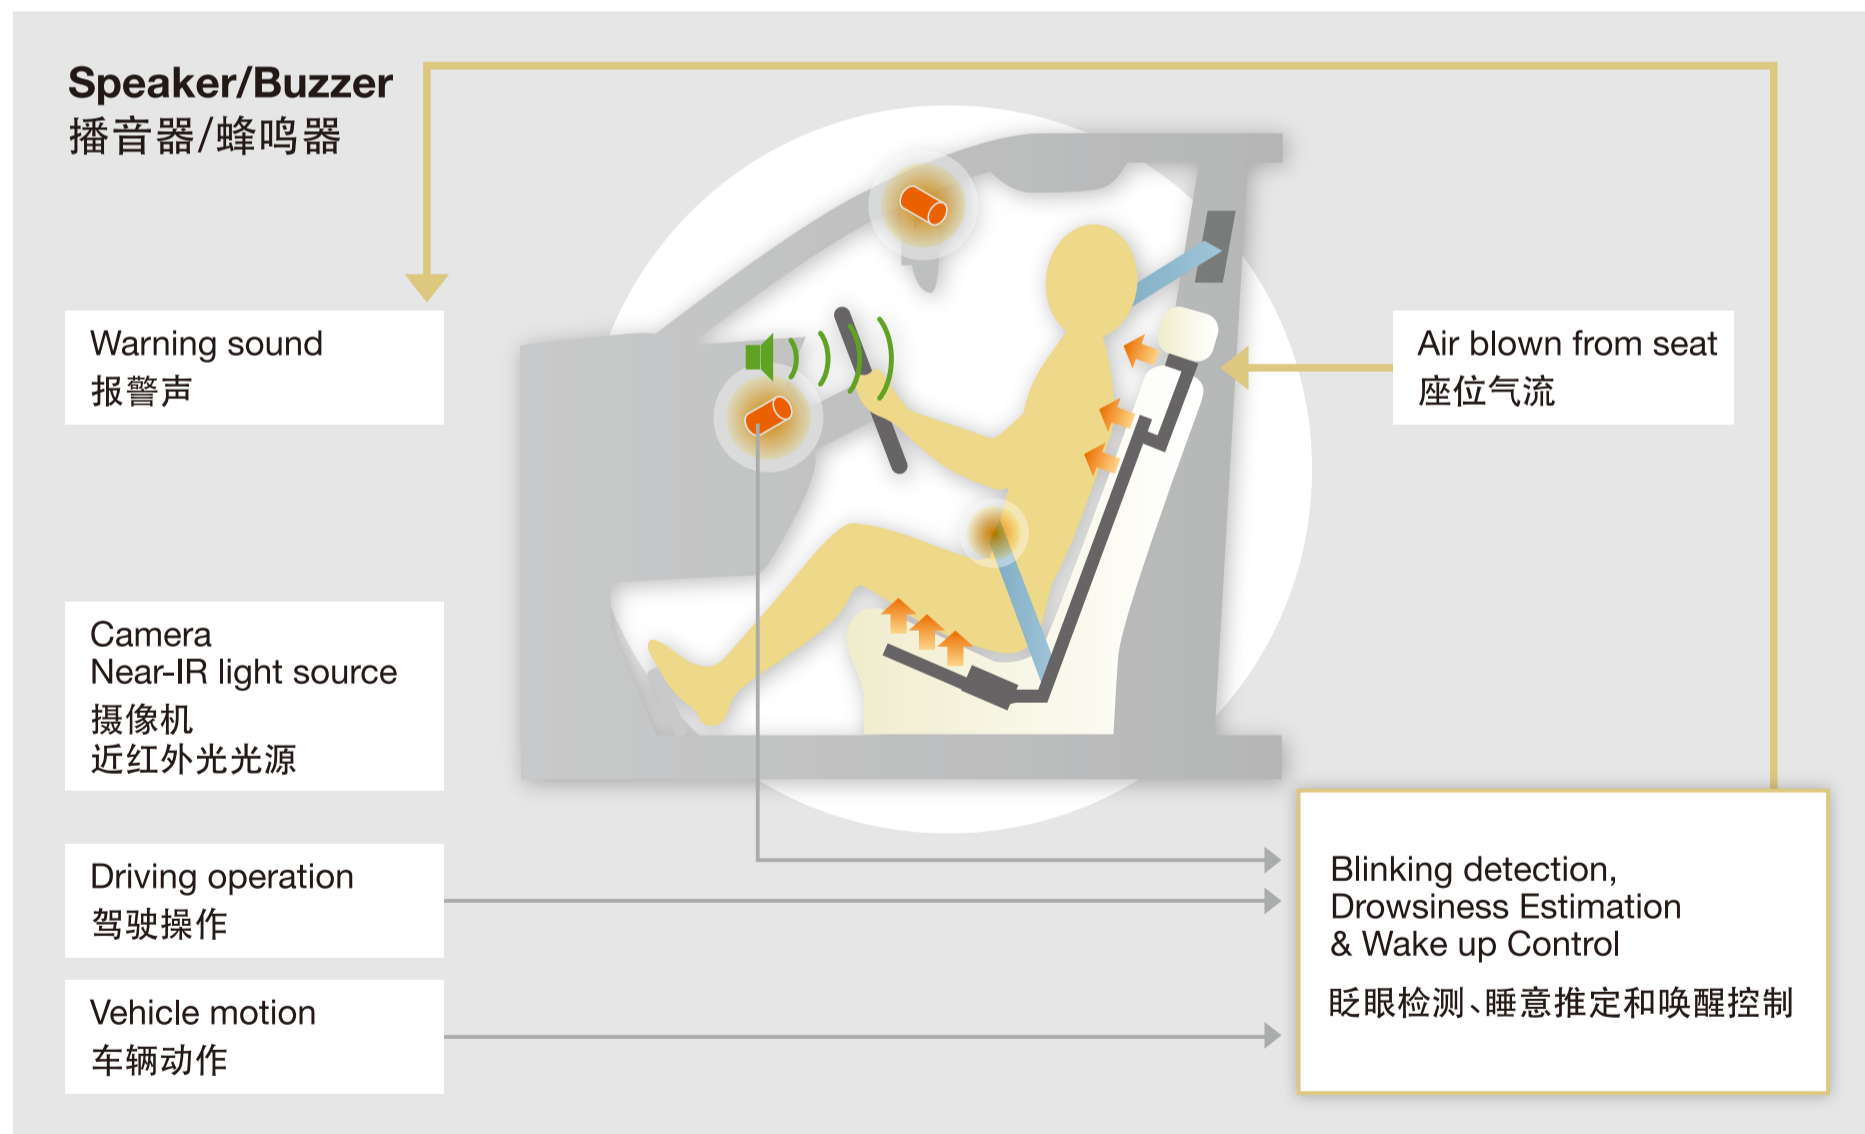

Drowsiness is determined using Blink sensing.  
When drowsiness is detected, the system will try to wake the driver by blowing air at them.  
The drowsiness monitoring system helps to ensure safer driving.

### 概述

根据眨眼,检测驾驶员的困倦程度。  
如检测到驾驶员有睡意,该系统通过座位气流将其唤醒。  
困倦监控系统协助司机享受安全驾驶的乐趣。

### Configuration

### 结构

### Feature

The vehicle refreshes the driver, before they feel drowsy.

### 特点

在司机感觉到睡意前,这个车辆使他们精神振作。
