# Night View Head-Up Display (HUD)

The supplementary view system improves the visibility when running at nighttime.

Projects near-infrared light to acquire images of the sight ahead at night and indicates the view using HUD within the driver's field of view on the windshield.

## Principle

## Indication Example

The driver can instantly recognize the information regarding what's ahead at night by utilizing the HUD.

The image is projected on the windshield using HUD, shortening the time for the driver to move his line of vision.
